

Owen Stepan

Boston, MA | (312) 982-9808 | stepan.o@northeastern.edu | linkedin.com/in/owen-stepan | github.com/ostepan8

EDUCATION

Northeastern University — Khoury College of Computer Sciences

Expected May 2027

B.S. Computer Science (AI Concentration, Robotics Minor) · Boston, MA

• GPA: 3.84 / 4.0 · Dean's List (4x)

EXPERIENCE

Software Engineer Co-op

Jan 2026 – Present

Subconscious.dev (MIT CSAIL spinout), Cambridge, MA

- Reduced new-customer benchmark setup from weeks to hours by building a reusable platform that generates a complete synthetic environment for any domain, including a seeded database, dedicated server, MCP layer, and scenarios that simulate real company workflows.
- Built the AWS engine that runs hundreds of these environments in parallel: Step Functions with a Distributed Map fans out into ephemeral ECS Fargate tasks and per-benchmark Aurora Serverless v2 databases (auto-scaling 0–8 ACU) via the Data API, with a long-lived ECS scoreboard service aggregating execution traces, Lambda functions handling orchestration, provisioning, scaling, and teardown, plus S3, VPC, and Cost Explorer for storage, networking, and per-benchmark spend visibility. Deployed with SST and Pulumi.
- Closed the model-improvement loop by converting aggregated agent traces into supervised fine-tuning datasets that retrain the models, creating a continuous data flywheel.
- Built Gastown, an autonomous development pipeline where a Sonnet 4.6 planner agent and implementer agent take Linear tickets from specification to pull request via Linear MCP and GitHub MCP, running on AWS Lambda with FastAPI and Anthropic Managed Agents, with milestone-scoped Slack notifications.
- Launched five Subconscious demonstration products that reached over 100 combined users and drove 533 launch-day visits on the flagship release: AI Degree Planner, Resume Tailor, E2B CLI, Subconscious Co-op, and Background Agent Emailer.

Mobile Application Engineer Co-op

Jan 2025 – Jun 2025

Ahold Delhaize, Quincy, MA

- Owned a new multi-module Android application end-to-end, writing all 50+ Jetpack Compose components and the JUnit 5 testing framework with SonarQube and JaCoCo that achieved 100% code coverage in CI/CD.
- Reduced database size and query latency in a React Native auditing application by replacing base64-encoded signature storage with an ID-based Node.js and MongoDB schema.

Developer

Sep 2024 – Present

Code4Community, Boston, MA

- Owned authentication and account management for ShelterLink, a React Native and Nest.js housing application serving LGBTQ+ individuals.
- Shipped secure authentication flows, user profiles, and an interactive housing map with advanced filtering, collaborating with engineers and designers in Agile sprints.

CEO and Full-Stack Developer

Dec 2022 – Present

Feed Tech LLC, Chicago, IL

- Led end-to-end development of Feed Official, a MERN social platform with a Next.js companion web application sharing a MongoDB and Express backend; scaled to over 150 active users and 700 posts.

SKILLS

- **AI and Agents:** Anthropic SDK, Anthropic Managed Agents, OpenAI SDK, OpenAI Agents, LangChain, PydanticAI, Strands, Subconscious SDK and TIM, Composio, Reducto, E2B sandboxes; prompt engineering; agent evaluation design; supervised fine-tuning data pipelines; retrieval-augmented generation
- **Cloud and Infrastructure:** AWS Lambda, Step Functions, Fargate, ECS, Aurora Postgres, EventBridge, CloudWatch, IAM, S3; Vercel; Supabase; Clerk; serverless and distributed-systems patterns; webhook-driven orchestration
- **Languages:** Python, TypeScript, JavaScript, Kotlin, Java, C, C++, C#, SQL, HTML, CSS
- **Web and Mobile:** React, Next.js, Tailwind, Node.js, Express, Nest.js, Convex, React Native, Jetpack Compose, Expo, Remotion
- **Data and Tools:** MongoDB, PostgreSQL, NumPy, Pandas, Git, GitHub, Linear, Jira, Confluence, JUnit 5, SonarQube, JaCoCo, LLVM, ElevenLabs, Adobe Premiere, NPM, NPX
